Art Unit: 2653

1. Applicant's response of 5/17/04 has been considered with the following results.
2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-8,10-15 and 20-28 are, drawn to optical disc sync. apparatus and method, classified in class 369, subclass 47.28.
  - II. Claim 9, drawn to a computer system including record medium for sync. purposes, classified in class 713, subclass 500.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions II and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as sync. of the computer system from bootable mag. discs. See MPEP § 806.05(d).
4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
5. Also, because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Because applicant has received an examination on the merits for both inventions, and the examiner is not certain as to which invention he intends to further prosecute in this application no phone call was made to applicant to request an election.

Applicant is given 30 days (one month) which ever is longer within which to elect an invention or take alternative steps.

**Hard copies of the application files are now separated from this examining corps, hence the examiner can answer no questions that requires a review of the file without sufficient lead-time.**
